Post-Op Instructions for Implants

- It is important to protect your new implant and keep this area clean, especially for the first 3 days of healing.
- Rinse two times daily for 2 weeks with Chlorohexadine rinse, which will aid in healing by cleaning the tissue around the implant and decreasing the amount of bacteria in your mouth.
- Take the prescribed antibiotic as directed and to completion.
- Call the office to schedule impressions for the final implant crown.
- The implant may need 4 to 6 months of time to join with the bone before it can receive a crown.
